¹ D&D refers to Diseases and Disorders

Introduction

The introduction of Activity Based Funding (ABF) in January 2016 represented a significant change to the way in which budgets are allocated to acute hospitals in Ireland and to the role of Diagnosis Related Groups (DRGs) and Casemix methodologies in determining those budgets. The move to ABF was a move from a block granted funding system with Casemix adjustments applied for efficiency to a system whereby Casemix methodologies are used to fund hospitals based on the activity they carry out.

Any ABF funding system relies on there being a relatively stable relationship between cost and activity across years so that prior cost and activity profiles can be used to estimate future funding requirements. The arrival of the Covid-19 pandemic in Ireland in March 2020 and the resulting response by our health services caused a major disruption to the relationship between cost and activity. Our publicly funded acute hospitals were emptied out in order to create capacity for treating Covid-19 patients. At the same time, significant additional expense was incurred in order to ensure as safe as possible an environment in our public hospitals while also securing additional capacity in the private hospital sector. This upheaval resulted in a cost to activity relationship in 2020 and 2021 which was different to that expected in a non-pandemic environment. As a result, a decision was taken that acute hospitals should be funded on a block grant basis in 2022 and 2023.

This ABF 2023 Price List details the ABF monetary value of each episode of inpatient and day case care carried out based on the DRG assignment and length of stay (LOS) of each treated patient. The prices reflect a best estimate of the ABF funding each case type would attract under normal ABF operation. These prices will be used in monthly ABF reporting to allow hospitals to continue to review their performance in an ABF context and to retain the insights afforded by ongoing ABF monitoring. The continuation of ABF practices during this short term return to block funding will ensure that hospitals maintain a focus on ABF activities and are well placed to re-engage with ABF on its post-pandemic re-introduction.

Activity in Outpatient Departments (OPD) and Emergency Departments (ED) are currently not within the scope of ABF and are therefore not included in this document.

Diagnosis Related Groups

Diagnosis Related Groups are a means of classifying patient hospital encounters into a manageable number of groups which can be used to describe the mix of cases or Casemix of the activity being carried out by a hospital. The DRGs are designed to group cases which are clinically similar and which are expected to consume a similar amount of resources. DRGs and Casemix systems are widely used internationally to manage and fund healthcare systems as well as for performance and quality monitoring.

Currently Ireland is using version 8.0 of the Australian Refined DRG system (AR-DRG v8.0) and the prices contained in this document are intended for use with data grouped using that classification.

The AR-DRG classification has a hierarchical structure. The topmost level is the Major Diagnostic Category (MDC) which categorises cases roughly along body system lines. Within MDC, cases are further partitioned into surgical, medical and other categories depending on whether the case involved an operating room (OR) procedure, a non-OR procedure or neither an OR nor a Non-OR procedure. Within these partitions, cases are assigned to Adjacent DRGs (ADRGs) which contain a number of DRGs which are generally defined by the same diagnosis or procedure lists. The DRG is the lowest level in the classification and it splits out ADRGs by differing complexity levels. Here complexity is an indication of the resource consumption associated with the cases in a DRG and may not correspond to a clinical interpretation of the complexity of a case.

There are 406 ADRGs and 807 DRGs within the AR-DRG classification system. 85 of the ADRGs have no further split by complexity level while the remaining 321 ADRGs are split by complexity to make up 722 DRGs.

The DRGs are identified by a 4 character code followed by a description of the DRGs content. The first character in the code is alphabetic and refers to the MDC that the DRG belongs to. The second and third characters are numeric and they identify both the partition and the ADRG to which the DRG belongs. The fourth character identifies the complexity level associated with the DRG.

Partitions are identified in the DRG code as follows:

- DRGs numbered 01-39 indicate that they are surgical
- DRGs numbered 40-57 indicate that they are “other”
- DRGs numbered 60-99 indicate that they are medical

Complexity levels are identified as A, B, C, D or Z where A indicates the DRG with the highest complexity level, D the DRG with the lowest complexity level and Z indicates that there is no complexity split within the ADRG. Not all ADRGs will contain DRGs corresponding to all 4 complexity levels. The precise meaning of the complexity level is specific to each ADRG and is given in the DRG description.

For example:

I04B Knee replacement, minc

I indicates MDC 08 Diseases and disorders of the musculoskeletal system and connective tissue

04 is the ADRG number and indicates that this is a surgical DRG

B indicates a case of minor complexity

Throughout the AR-DRG system several abbreviations are used to indicate the level of severity and/or complications associated with a particular DRG. These are listed below.

| | |
|------|-------------------------|
| +/- | With/Without |
| EXTC | Extreme Complexity |
| MAJC | Major Complexity |
| INTC | Intermediate Complexity |
| MINC | Minor Complexity |

Weighted Units, Base Price and Relative Values

The generic currency of the ABF system is referred to as the Weighted Unit (WU). The WU is a relative measure of the resource consumption of cases in an ABF system and is set so that the average resource consumption or WU level across all cases to be funded is 1. In this way cases which consume more resources than average have a WU value greater than 1 and those which consume fewer resources than average have a WU value less than 1.

Associated with the notion of a WU is the concept of a base price. The base price is the monetary value associated with 1 WU and is therefore the average value per case across all cases to be funded. The monetary value of any case can be calculated by multiplying its WU value by the base price.

As inpatients and day cases are treated separately in the modelling process there is a separate base price calculated for each of these patient types. As the base price is the value of 1 WU it follows that the definition of a WU for inpatients is not the same as that for day cases and the two cannot be directly combined. To obtain the price to be paid for both inpatients and day cases the RVs (see definition below) specific to each setting must be applied to derive the WU value and the base price for each patient type must then be applied to derive the individual prices. Only at this point can the two be combined to get an overall total.

The DRG prices presented in this document are given in terms of relative values (RVs). Relative values express the prices of the various payments for each DRG in terms of WUs. The RVs are used to determine the total WU value for a case and hence the price to be paid for that case.

Most DRGs will have a separate RV quoted for:

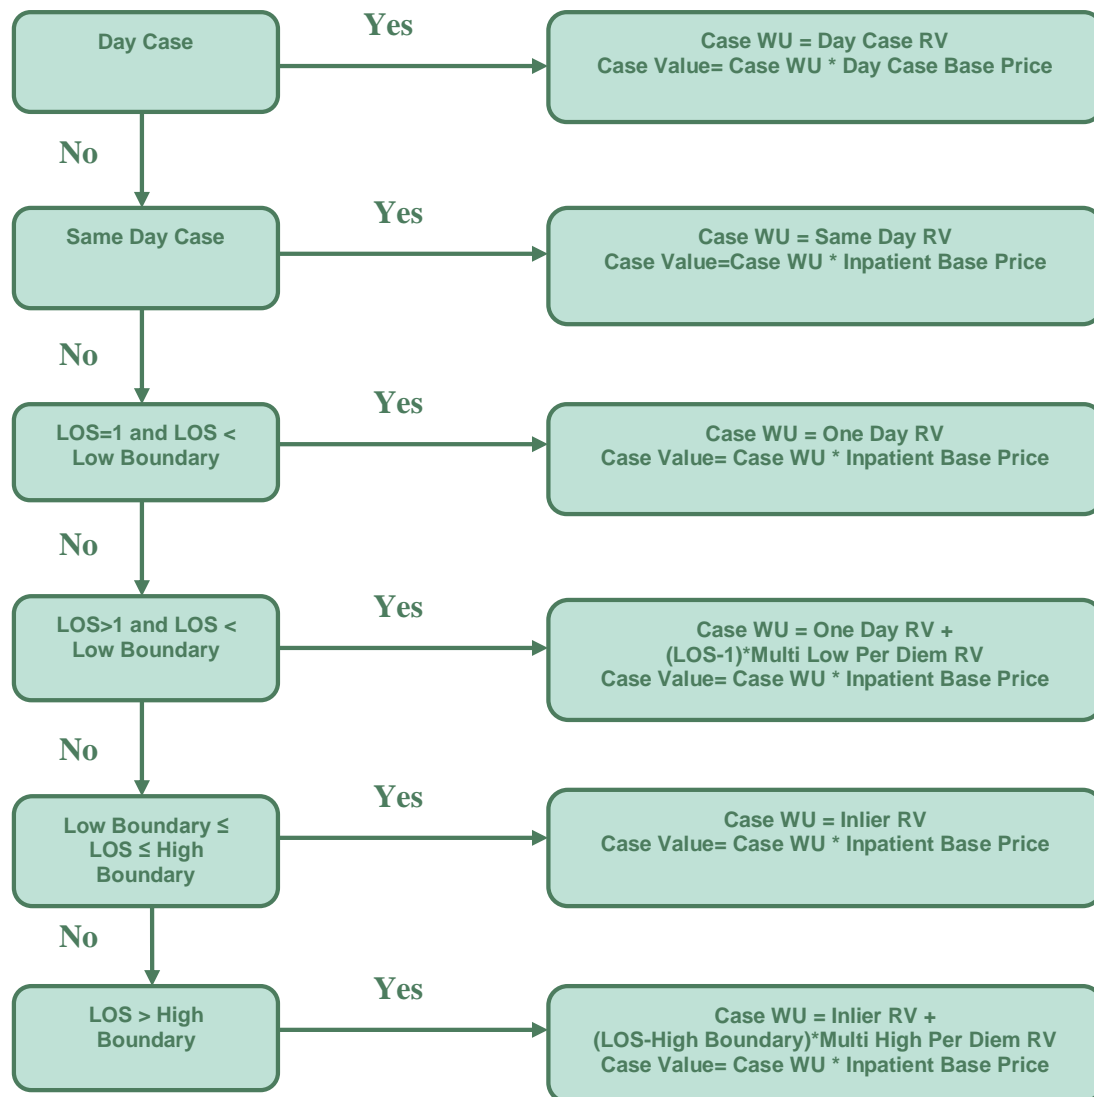

- Day cases
- Sameday Cases
- One Day Cases
- Low Outlier Per Diem
- Inlier Cases
- High Outlier Per Diem

The inpatient base price for 2023 is €6,101 and the day case base price for 2023 is €934.

The relative values and prices presented in this document are applicable to the entire episode of care from admission to an inpatient or day case bed to discharge from hospital. They cannot be used to infer either a cost or price for the treatment of a particular diagnosis, or the provision of a particular intervention or procedure in isolation of the entire episode of care. The HPO does not provide pricing information for individual diagnoses, interventions or procedures.

Flow Chart for Applying the ABF Price List

The flow chart below describes how to correctly implement the ABF 2023 Price List.

Notes:

1. Day cases are identified using HIPE question 16 - *Was this a day case? (A day case is a patient who is admitted to hospital on an elective basis for care and/or treatment which does not require the use of a hospital bed overnight and who is discharged as scheduled)*
2. Length of stay is calculated as date of discharge - date of admission. The length of stay for cases admitted and discharged on the same day is set to 0.5.
3. Same day cases are defined as **non-elective inpatient discharges** which are admitted and discharged on the same date i.e. date of discharge=date of admission. Same day cases are distinct from day cases as defined in note 1 above.

Pseudocode for Applying the ABF Price List

IF DISCHARGE_DATE-ADMISSION_DATE=0 THEN LOS=0.5;
ELSE LOS= DISCHARGE_DATE-ADMISSION_DATE

IF DAYCASE INDICATOR=1 THEN DO;
 WU=DAYCASE;
 VALUE=WU*DAYCASE_BASEPRICE;
END;

ELSE IF DAYCASE INDICATOR=0 THEN DO;

 IF LOS=0.5 THEN WU=SAMEDAY;
 ELSE IF LOS=1 AND LBOUND GT 1 THEN WU=ONEDAY;
 ELSE IF LOS>=2 AND LOS< LBOUND THEN WU=ONEDAY+(LOS-1)*MULTILOW;
 ELSE IF LOS>=1 AND LOS>= LBOUND AND RAWLOS<=HBOUND THEN WU=INLIER;
 ELSE IF LOS>=2 AND LOS> HBOUND THEN WU=INLIER+(LOS- HBOUND)*MULTIHIGH;

 VALUE=WU*INPATIENT_BASEPRICE;

END;

Notes: Length of stay is calculated as date of discharge - date of admission. The length of stay for cases admitted and discharged on the same day is set to 0.5.
Lbound and Hbound represent the low and high length of stay boundaries.

Example I04B Knee replacement, minc (Inpatient)

Low Boundary = 2 days
High Boundary = 9 days
Inlier Price = €12,993

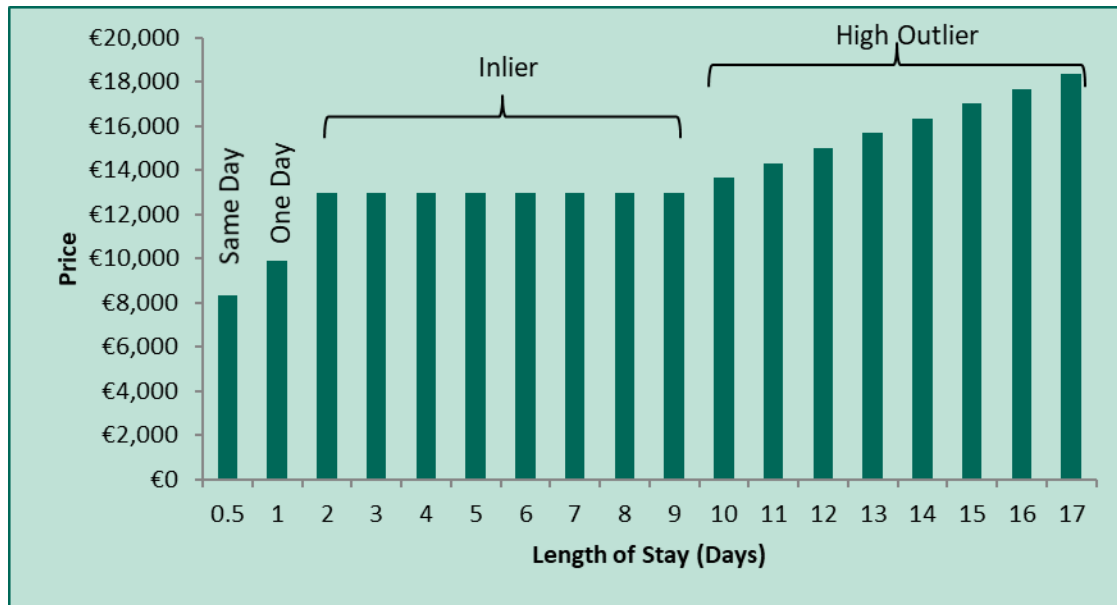

| Length of Stay | Case Type | WU Calculation | WU | Price Paid |
|----------------|--------------|----------------|-------|------------|
| 0.5 | Same Day | 1.369 | 1.369 | €8,354 |
| 1 | One Day | 1.623 | 1.623 | €9,900 |
| 7 | Inlier | 2.130 | 2.130 | €12,993 |
| 12 | High Outlier | 2.130+3*0.110 | 2.460 | €15,002 |

Notes:

The values presented in this table have been rounded therefore multiplying the WU value by the base price will not yield the exact price to be paid.

* WU here refers to day case WU and the value is derived by multiplying the day case WU by the day case base price.

I04B Knee replacement, Minor Complications Payment Curve

Important Notes on Using the Price List

The following technical notes should be understood and adhered to when using the information contained in the price list.

1. The weighted unit values and prices quoted in this document are intended for use in determining the DRG value of ABF activity undertaken during 2023 only. These prices should not be applied to activity from other years.
2. The RVs and base prices contained in this price list have been generated as a complementary pairing and should only be used in conjunction with each other. It is not valid to take the base prices from one year and apply them the RVs/WU from another year to obtain estimates of activity value.
3. The relative values and prices presented in this document are applicable to the entire episode of care from admission to an inpatient or day case bed to discharge from hospital. They cannot be used to infer either a cost or price for the treatment of a particular diagnosis, or the provision of a particular intervention or procedure in isolation of the entire episode of care. The HPO does not provide pricing information for individual diagnoses, interventions or procedures.
4. The value of activity derived by applying this price list to the 2023 HIPE activity data does not include ABF co-payments to hospitals for:
 - a. high cost oncology drugs
 - b. tertiary referral hospitals
 - c. specialist paediatric hospitals
 - d. premium associated with agency staff

These co-payments are made at the hospital level and are not broken down to the individual DRG level.

5. In instances where there are insufficient case numbers to derive a reliable price for a particular complexity level within an ADRG, cases are pooled and a common price is set for 2 or more DRGs within the ADRG.
6. A DRG price is quoted if there has been at least 1 case reported on the national HIPE file. In particular, the presence of a day case price for a DRG where the case numbers are small is not an indication that this activity should be undertaken as a day case.

INPATIENTS
